

ÖZGÜR ÇETİNTAŞ

Senior QA Engineer & SDET | API, Backend & Test Automation

Spijkenisse, Netherlands | +31 6 15 64 10 76 | ozgur.cetintas@yahoo.com

[LinkedIn](#) | [GitHub](#) | [Portfolio](#)

Highly Skilled Migrant (kennismigrant) · transferable to an IND recognised sponsor · No relocation required

PROFESSIONAL SUMMARY

Senior QA Engineer & SDET with 8 years across web, mobile, API, backend and database testing. Established the QA function at Pixery and own test architecture and release readiness across 20+ applications and 100+ customer funnels. Hands-on with TypeScript, Playwright, Java, REST Assured, Cucumber, CI/CD, Docker and Kubernetes, with experience leading and mentoring engineers.

PROFESSIONAL EXPERIENCE

Senior Test Automation Engineer (Quality Owner) — Pixery B.V. / PixeryLabs

Consumer app and game studio (founded 2013); products such as Funimate and Impresso have reached 100M+ users.

Oct 2019 – Present | Istanbul, Türkiye; Netherlands since Oct 2025 | Promoted from Test Automation Engineer in 2022

- Established the QA function as the first QA hire, defining test strategy, automation architecture, release validation, defect triage and CI/CD quality gates across a multi-product portfolio.
- Owned end-to-end quality and release readiness; led and mentored up to four engineers (2022–2025) while remaining hands-on with framework architecture, code review and automation.
- Built and maintain approximately 1,000 automated tests across web, mobile, API, backend, database and cross-system flows, with Python tooling for test-data generation; risk-based prioritisation and parallel execution cut regression from 1–2 days to a few hours and manual regression effort by ~50%.
- Evolved automation from Java/Selenium/Appium/Cucumber to Playwright with TypeScript, WebdriverIO and Maestro; built CI/CD quality gates with GitHub Actions/Jenkins, Docker, Kubernetes, Selenium Grid, LambdaTest and Allure.
- Built Java/REST Assured API and backend automation for authentication, service contracts and negative paths, including payment and subscription flows (Stripe, Solidgate, StoreKit, Play Billing); Playwright with TypeScript for web funnels; used k6 and OpenTelemetry in quality/performance engineering workflows.
- Improved release quality through stronger payment/subscription coverage and production RCA, contributing to an approximately 95% reduction in user-reported bugs alongside substantially improved app crash rates.
- Integrated Cursor, Claude Code and OpenAI Codex into daily engineering, reducing test-creation time by ~30% (own before/after measurement); also use Playwright Agents, Promptfoo and MCP tooling.

Software Test Automation Engineer — Finartz

Sep 2018 – Oct 2019 | Istanbul, Türkiye

- Automated a 3-D Secure 2.0 Access Control Server with 10,000+ data-driven Cucumber scenarios covering authentication, payments and protocol-level flows.
- Developed Java/REST Assured API and backend automation for service contracts, integrations, negative scenarios and validation rules, alongside Selenium/Cucumber/JUnit UI coverage.

CORE SKILLS

Primary engineering: TypeScript, Java, Python, JavaScript; Playwright, Selenium 4, WebdriverIO, Appium, Maestro

Test architecture & API: Cucumber, REST Assured, JUnit 5, TestNG, Pact, Postman, Testcontainers, SQL (PostgreSQL, MongoDB)

CI/CD & infrastructure: GitHub Actions, Jenkins, Docker, Kubernetes, Selenium Grid, Allure, Maven, k6, OpenTelemetry

AI-assisted QE: Claude Code, OpenAI Codex, Cursor, Playwright Agents, MCP, Promptfoo

Leadership & delivery: Test strategy, automation architecture, mentoring, risk-based testing, release readiness, quality gates, RCA

SELECTED ENGINEERING PROJECTS

Trident — Java Test Automation Framework | Open Source, Maven Central

[GitHub](#) | [Maven Central](#)

- Built a reusable Java 21 web/API automation framework with Selenium 4, REST Assured, Cucumber and Maven, published as 8 modular artifacts on Maven Central with an archetype for project scaffolding; the reference implementation tests a legacy banking app running in Testcontainers, with ~7 seconds from archetype generation to a green suite.

TestLease — Test Resource Lease Manager | Open Source

[GitHub](#)

- Prevents shared test-account and environment conflicts in parallel runs through expiring leases, Playwright fixtures, REST API, MCP tooling, crash recovery and audit trails; verified with 129 tests and a parallel run of 8 workers sharing 3 accounts with 0 conflicts.

Modern Quality Engineering Lab | Open Source

[GitHub](#)

- Reference quality stack combining Playwright E2E, Pact, Testcontainers/PostgreSQL, k6, Promptfoo LLM evaluation, OpenTelemetry, MCP tooling and GitHub Actions; CI runs 6 parallel jobs and mutation testing achieves a 96.4% score.

EDUCATION & LANGUAGES

B.Sc. Computer Engineering — Kadir Has University, Istanbul | 2013–2018

Languages: Turkish (Native) | English (Professional Working Proficiency) | Dutch (Currently Learning)
