

ÖZGÜR ÇETİNTAŞ

SENIOR QA ENGINEER | Backend & API Test Automation | Quality Engineering

Spijkenisse, Netherlands | +31 6 15 64 10 76 | ozgur.cetintas@yahoo.com | [LinkedIn](#) | [Portfolio](#) | [GitHub](#)

Based in the Netherlands | No relocation required

PROFILE

Senior QA Engineer with 8 years of experience across backend, API, web, mobile and database testing in Agile/Scrum environments, targeting Test Engineer II roles focused on backend and API quality engineering. Built the QA function at Pixery from scratch and now own test design, functional testing, risk-based testing, automation architecture and release readiness across 20+ applications and 100+ customer funnels. Hands-on with REST Assured, Playwright, Postman, Java, TypeScript, SQL and CI/CD, with practical experience testing AI-driven features and using Claude Code, OpenAI Codex and Playwright Agents to improve quality workflows. Strong focus on shift-left testability, product architecture reviews, deterministic fast-feedback checks, end-user journeys, root cause analysis and clear communication with engineering, product and business stakeholders.

WORK EXPERIENCE

Pixery B.V. / PixeryLabs | Oct 2019 - Present

Senior Test Automation Engineer | 2022 - Present | Netherlands / Türkiye

- Own end-to-end quality across 20+ applications and 100+ customer funnels, independently driving functional testing, test design, risk-based testing, exploratory testing, automation strategy, release readiness and quality practices from initial design through release.
- Built and maintain approximately 1,000 automated tests across API, backend, web, mobile, database and cross-system flows; parallel execution and risk-based prioritisation reduced regression cycles from 1-2 days to a few hours and manual regression effort by approximately 50%.
- Build deterministic API and backend automation with REST Assured, Playwright, Postman and code-based test tooling; validate service contracts, authentication, payments, subscriptions, negative paths, validation rules and integration failures.
- Work shift-left in Agile squads with engineers, product and design to make features testable early: review product architecture, PRDs, designs and pull requests, isolate verification points, identify edge cases and failure modes, and gate changes with automated checks in GitHub Actions and Jenkins.
- Use logs, SQL, Charles Proxy, observability signals and cross-system evidence for troubleshooting, defect investigation and root cause analysis; communicate quality trade-offs and release risks to both technical and non-technical stakeholders.
- Integrated Claude Code, OpenAI Codex, Cursor and Playwright Agents into daily QA engineering for test implementation, debugging, test-data generation and maintenance; use Promptfoo and MCP-based tooling to evaluate AI-driven product features and agent workflows.
- Led and mentored up to four QA engineers, coaching on testability, automation design, risk-based testing, defect investigation and continuous quality improvement while remaining hands-on with architecture and code reviews.
- Expanded non-functional coverage through k6 performance testing, resilience-oriented negative-path checks, OpenTelemetry-based observability and quality gates for critical customer flows.

Test Automation Engineer | Oct 2019 - 2022 | Istanbul, Türkiye

- Joined as the first QA Engineer and established the QA function from scratch, defining testing processes, regression plans, release criteria, reusable automation architecture and quality documentation across web and mobile products.
- Built Java/Selenium/Appium/Cucumber automation for authentication, payments, subscriptions and critical end-user workflows, improving repeatability and enabling faster, more confident releases.

Software Test Automation Engineer | Finartz

Sep 2018 - Oct 2019 | Istanbul, Türkiye

- Automated a 3-D Secure 2.0 Access Control Server with 10,000+ data-driven Cucumber scenarios covering authentication, payments, protocol-level behaviour and negative paths.
- Developed Java/REST Assured API and backend automation for service contracts, integrations, validation rules and error handling, alongside Selenium/Cucumber/JUnit UI coverage.

SKILLS

Backend / API: REST Assured, REST APIs, Postman, Playwright, service contracts, integration testing, system testing, negative-path testing, authentication and payment flows

Automation: Java, TypeScript/JavaScript, Selenium, Appium, WebdriverIO, Maestro, Cucumber, TestNG, JUnit 5, Jest, Vitest, Pytest, Pact, WireMock, Testcontainers

Data / Troubleshooting: SQL, PostgreSQL, MongoDB, SQLite, Charles Proxy, logs, root-cause analysis, OpenTelemetry, observability

CI/CD & Infrastructure: GitHub Actions, Jenkins, Docker, Kubernetes, Selenium Grid, LambdaTest, Allure, Maven, k6

AI / LLM Testing: Claude Code, OpenAI Codex, Cursor, Playwright Agents, MCP, Promptfoo, AI-assisted test development, AI feature evaluation

Quality Engineering: Functional testing, test design, risk-based testing, exploratory testing, shift-left testing, product architecture reviews, root cause analysis, release readiness, quality gates, stakeholder management, mentoring and coaching, Agile/Scrum

SELECTED ENGINEERING PROJECTS

TestLease - Test Resource Lease Manager | **Open Source** | [GitHub](#)

- Built test infrastructure for exclusive, expiring leases of shared test accounts and environments, with Playwright fixtures, REST API, MCP server, SQLite/Docker support, TTL/heartbeat recovery, quarantine and auditable test evidence.

Modern Quality Engineering Lab | **Open Source** | [GitHub](#)

- Built a production-style quality architecture combining Playwright E2E, Pact contract testing, Testcontainers/PostgreSQL integration tests, k6 performance testing, Promptfoo LLM evaluation, OpenTelemetry tracing, MCP tooling and GitHub Actions.

Trident - Java Test Automation Framework | **Open Source** | [GitHub](#)

- Built a reusable Java 21 web/API automation framework with Selenium 4, REST Assured, Cucumber, Testcontainers and Maven; published modular artifacts and a Maven archetype for reusable project scaffolding, parallel execution and CI validation.

EDUCATION

B.Sc. Computer Engineering - Kadir Has University, Istanbul | **2013-2018**

LANGUAGES

Turkish: Native | English: Professional working proficiency | Dutch: A1 (learning)
