Netherlands-based | Highly Skilled Migrant | Recognised-sponsor transfer required | No relocation required

PROFESSIONAL SUMMARY

Senior Quality Automation Engineer with 8 years across web, mobile, API, backend and database testing. Established the QA function at Pixery and own end-to-end quality, test architecture and release readiness for 20+ applications and 100+ customer funnels. Hands-on with TypeScript, Playwright, Java, Cucumber, API automation, CI/CD, Docker and Kubernetes, with experience mentoring engineers and evolving automation stacks. Reduced regression cycles from 1–2 days to a few hours and manual regression effort by ~50%.

PROFESSIONAL EXPERIENCE

Senior Test Automation Engineer (Quality Owner) — Pixery B.V. / PixeryLabs

Oct 2019 – Present | Istanbul, Türkiye → Netherlands (Oct 2025) | Promoted from Test Automation Engineer

- Established the QA function as the first QA hire, defining test strategy, automation architecture, release validation, defect triage and CI/CD quality gates for 20+ applications and 100+ customer funnels.
- Owned end-to-end quality and release readiness; led and mentored up to four engineers (2022–2025) while remaining hands-on with framework architecture, code review and automation.
- Built and maintain approximately 1,000 automated tests across web, mobile, API, backend, database and cross-system flows. Risk-based prioritisation and parallel execution reduced regression cycles from 1–2 days to a few hours and manual regression effort by approximately 50%.
- Evolved automation from Java/Selenium/Appium/Cucumber to Playwright with TypeScript, WebdriverIO and Maestro; built CI/CD quality gates with GitHub Actions/Jenkins, Docker, Kubernetes, Selenium Grid, LambdaTest and Allure.
- Coach engineers on automation design, risk-based coverage and release readiness; use Testcontainers and reusable test infrastructure patterns in public reference implementations.
- Improved release quality through stronger payment/subscription coverage and production RCA, contributing to an approximately 95% reduction in user-reported bugs alongside substantially improved app crash rates.
- Integrated Cursor, Claude Code and OpenAI Codex into daily engineering. Personal before/after measurement indicates approximately 30% faster test creation; also use Playwright Agents, Promptfoo and MCP tooling for agent-assisted quality workflows.

Software Test Automation Engineer — Finartz

Sep 2018 – Oct 2019 | Istanbul, Türkiye

- Automated a 3-D Secure 2.0 Access Control Server with 10,000+ data-driven Cucumber scenarios covering authentication, payments and protocol-level flows.
- Developed Java/REST Assured API and backend automation for service contracts, integrations, negative scenarios and validation rules, alongside Selenium/Cucumber/JUnit UI coverage.

CORE SKILLS

Primary engineering: TypeScript, Java, Python, JavaScript; Playwright, Selenium 4, WebdriverIO, Appium, Maestro

Test architecture & API: Cucumber, REST Assured, JUnit 5, TestNG, Pact, Postman, Testcontainers, SQL

CI/CD & infrastructure: GitHub Actions, Jenkins, Docker, Docker Compose, Kubernetes, Selenium Grid, LambdaTest, Allure, Maven

AI-assisted QE: Claude Code, OpenAI Codex, Cursor, Playwright Agents, MCP, Promptfoo, Healenium

Leadership & delivery: Test strategy, automation architecture, mentoring, risk-based testing, release readiness, quality gates, RCA

SELECTED ENGINEERING PROJECTS

Trident — Java Test Automation Framework | [Open Source](#), [Maven Central](#)

[GitHub](#) | [Maven Central](#)

- Built a reusable Java 21 web/API automation framework with Selenium 4, REST Assured, Cucumber and Maven, published as modular artifacts on Maven Central with an archetype for project scaffolding; the reference implementation tests a legacy banking app running in Testcontainers.

TestLease — Test Resource Lease Manager | [Open Source](#)

[GitHub](#)

- Prevents shared test-account and environment conflicts in parallel runs through expiring leases, Playwright fixtures, REST API, MCP tooling, crash recovery and audit trails.

Modern Quality Engineering Lab | [Open Source](#)

[GitHub](#)

- Reference quality stack combining Playwright E2E, Pact, Testcontainers/PostgreSQL, k6, Promptfoo LLM evaluation, OpenTelemetry, MCP tooling and GitHub Actions.

EDUCATION & LANGUAGES

B.Sc. Computer Engineering — Kadir Has University, Istanbul | 2013–2018

Languages: Turkish (native) | English (B2, professional working proficiency) | Dutch (A1, learning)
